#### Objective

In this challenge, you will work with arithmetic operators. Check out the [Tutorial](#) tab for learning materials and an instructional video.

#### Task

Given the meal price (base cost of a meal), tip percent (the percentage of the meal price being added as tip), and tax percent (the percentage of the meal price being added as tax) for a meal, find and print the meal's total cost. Round the result to the nearest integer.

#### Example

$meal\_cost = 100$

$tip\_percent = 15$

$tax\_percent = 8$

A tip of  $15\% * 100 = 15$ , and the taxes are  $8\% * 100 = 8$ . Print the value **123** and return from the function.

#### Function Description

Complete the solve function in the editor below.

solve has the following parameters:

- int meal\_cost: the cost of food before tip and tax
- int tip\_percent: the tip percentage
- int tax\_percent: the tax percentage

Returns The function returns nothing. Print the calculated value, rounded to the nearest integer.

**Note:** Be sure to use precise values for your calculations, or you may end up with an incorrectly rounded result.

#### Input Format

There are **3** lines of numeric input:

The first line has a double,  $meal\_cost$  (the cost of the meal before tax and tip).

The second line has an integer,  $tip\_percent$  (the percentage of  $meal\_cost$  being added as tip).

The third line has an integer,  $tax\_percent$  (the percentage of  $meal\_cost$  being added as tax).

#### Sample Input

```
12.00
20
8
```

#### Sample Output

```
15
```

#### Explanation

Given:

$meal\_cost = 12$ ,  $tip\_percent = 20$ ,  $tax\_percent = 8$

Calculations:

$tip = 12$  and  $\frac{12}{100} \times 20 = 2.4$

$tax = 8$  and  $\frac{8}{100} \times 20 = 0.96$

$total\_cost = meal\_cost + tip + tax = 12 + 2.4 + 0.96 = 15.36$

$round(total\_cost) = 15$

We round  $total\_cost$  to the nearest integer and print the result, **15**.
